

NX Series Fertiliser Spreader

The COSMO NX Series is a professional spreader, with a large hopper capacity, designed to spread piled, granular or powder fertiliser over a wide width up to 24m.

The NX Spreader has been developed through extensive, independently verified, field testing. It provides the operator with a very accurate and uniform spread due to the slow rotating agitators that minimises powdering and damage to fertiliser, and the adjustable vanes on the spinner discs. The NX Spreader has been designed with twin openings that are hydraulically controlled while manual levers allow the operator to preset the discharge rate and spreads pattern; one side (left or right) or full coverage (both left and right). These manual settings are more economical and reliable compared to electronic options.

The NX Spreader is Italian made, and careful consideration has been given to all components. The metal hopper, frame and gearbox drive system are all manufactured in house, parts that come in contact with fertiliser are made from stainless steel, and an internal hopper grate prevents large lumps from blocking exits which could compromise the spreading pattern.

The capacity of the rectangular metal hopper (1100ltr) can be increased with the addition of extensions, resulting in two larger models; a 1600ltr (NX1600) and a 1900ltr (NX1900).

Code	CNX1100	CNX1600	CNX1900
Size reference	1100ltr Twin Disc Spreader	1600ltr Twin Disc Spreader	1900ltr Twin Disc Spreader
Capacity (lt/kg)	930 / 1088	1390 / 1626	1644 / 1930
Spreading width (m)	12 - 24
