

# RE-A Series Fertiliser Spreader

The COSMO RE-A Series Fertiliser Spreader is a double disc spinner spreader capable of spreading piled or granular fertiliser over a width up to 18m. It is a light weight compact spreader that can be used in vineyards, orchards and on pasture.

The metal hopper has twin openings (one for each disc) that are independently hydraulically operated via a double acting ram. This allows the operator to hydraulically control the machine to spread on one side (left or right) or full coverage (both left and right).

The rear shield and spinner discs are made from stainless steel.

The RE-A Spreader is available with an optional twin side discharge attachment. This attachment limits the discharge of material into bands directly on or under the plants, and is very popular with growers looking to spread material accurately onto plants and reduce their operating and material costs.

Refer to page 67 for details of COSMO's state of the art, automated painting system.
