

CX Series Fertiliser Spreader

The COSMO CX Series is a high-capacity professional spreader, designed to efficiently distribute piled, granular or powdered fertiliser over an impressive width of up to 36m. Its slow rotating agitators protect fertiliser integrity and ensure an accurate and uniform spread.

The CX Spreader features twin hydraulically controlled openings, along with manual levers for presetting the discharge rate and spread pattern - be it one side (left or right) or full coverage (both left and right). The adjustable 'drop' position and spring-loaded vane adjustment system offer added flexibility.

Manufactured in Italy with meticulous attention to detail, the CX Spreader boasts a metal hopper, frame and gearbox drive system, all produced in-house for exceptional quality. Its components in contact with fertiliser are made from stainless steel, ensuring durability. An internal hopper grate prevents blockages, ensuring a consistent and optimal spreading pattern.

Spreading

Twin openings are hydraulically controlled. Positive-locking manual levers allow operator to preset discharge rate and spread pattern; one side (left or right) or full coverage (both left and right).

The COSMO CX Series Fertiliser Spreader boasts a sturdy frame constructed from folded thick metal components, reinforced and welded to form a robust one-piece design. This box section frame provides a remarkable lift capacity of 3,200kg. The rectangular metal hopper has a standard capacity of 1500 litres, expandable with extensions to reach a maximum capacity of 3200 litres. Optional inspection ladders are available to assist the operator during loading.
