

RE-A Series Fertiliser Spreader

The COSMO RE-A Series Fertiliser Spreader is a double disc spinner spreader capable of spreading piled or granular fertiliser over a width of up to 18m. This lightweight and compact spreader is perfect for vineyards, orchards, and pastures.

The metal hopper has twin openings, and each is independently, hydraulically operated via a double-acting ram. This allows the operator to control the spreader's distribution, either on one side (left or right) or achieve full coverage (both left and right) with ease.

Crafted in Italy, the frame is constructed from folded metal components, reinforced and welded to form a robust one-piece design. Metal parts are undercoated with a two-stage polyurethane finish, ensuring exceptional durability. The high-quality paint finish achieved by COSMO's state-of-the-art, automated paint system adds to its longevity. Notable components such as the rear tractor shield, double spinner discs, and laser-cut fertiliser application rate plate are all crafted from stainless steel.
