

Landscape Rake

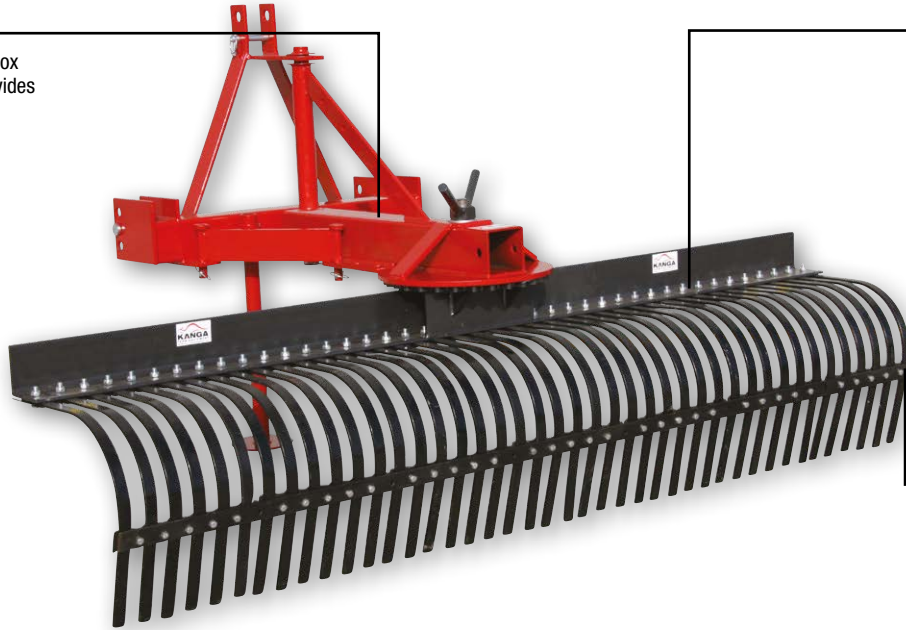

The KANGA Landscape Rakes excel in tackling challenging clean-up tasks, from removing debris, gravel and brush to delicately raking for light-duty lawn care and preparing areas for planting.

Designed with versatility, KANGA Landscape Rakes provide angle, offset and tilt capabilities, allowing them to adapt to various landscape requirements, even on uneven or undulating ground. With a 360° pivot, operators have complete control over the material flow, directing it to the left, right or centre as needed.

Headstock

Square 100 x 100mm box section main beam provides greater strength.

Mounting system

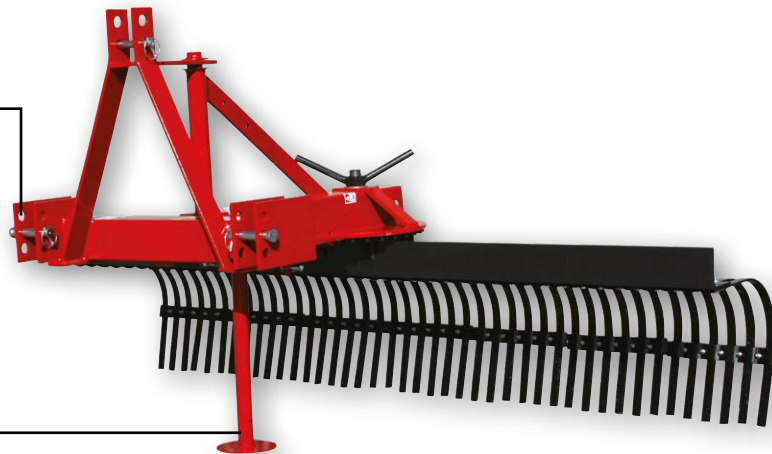

Designed with a convenient bolt-on mounting system, replacing a damaged tooth is a simple and efficient task that can be accomplished without the need to remove all the other teeth.

Tines working in unison

Included as a standard feature, the implement comes with an adjustable tine stiffener attachment, providing enhanced strength and alignment for a consistent grade.

3-Point linkage

Category 1. Two-plate, double clevis mount designed to absorb lateral load when turning; increasing implement longevity.

A retractable parking stand keeps the frame off the ground for quick and easy attachment.

Code	KLSR150	KLSR210
Size reference	1.5m 5'0" 60"	2.1m 7'0" 84"
Adjustments	Angle, offset and tilt	
Controlled by	Pins, clips, wingnut	
Rake angle	28 positions over 360°	
Rake offset	6 positions (3 left and 3 right)	
Overall width (mm)	1500	2100
No. of tines	30	42
Tractor range (hp)	15 - 50 12.5 - 42 @ PTO	30 - 50 25 - 42 @ PTO
Weight (kg)	136	160
