PTP-PL SERIES FERTILISER SPREADER

Made in Italy, the COSMO PTP-PL Series Fertiliser Spreaders are compatible with a wide range of tow vehicles, including ATVs, RTVs, tractors and cars. With no PTO connection required, they offer a convenient solution for operators who prefer a tow-behind implement.

These spreaders are designed for distributing granular, powdered or pelletised fertiliser and seed across lawns, paddocks and horticultural plots. They're well-suited to small farms, lifestyle properties and grounds maintenance where covering large areas quickly and efficiently is a priority.

As the implement is towed, the turning wheel drives a gearbox, which powers a spinner disc to distribute material across a working width of 8 to 14 metres. The spreading pattern can be adjusted to suit the task, and lateral exits allow for left, right or full-width coverage.

Twin exits

Lateral (side) exits provides versatile spreading options, allowing the operator to achieve left, right, or full coverage.

Stainless steel disc

Six adjustable stainless steel vanes offer the operator additional spreading pattern adjustment, while the direct drop of material onto the spinner disc ensures uniform and precise distribution.

Drive system

Single-speed metal gearbox gains power by being towed; pneumatic tyres (16" x 6.5") with metal rims (8"), height-adjustable drawbar and tow-ball hitch (50mm).
